

## Flight Safety Advisory Circular

FSAC No: 88/001/ CS

August, 1999

Subject:

Cabin safety demonstration must be completed before take-off.

### Background:

A flight from HKG to TPE the cabin safety demonstration was not conducted before departure.

According to the investigation, the VTR system was found inoperative and the safety demo video could not be presented. At this time, the flight had been cleared for take-off and the CP informed the flight deck that "abin ready" before the safety demo had been completed.

### Recommendation:

During pre-flight check, flight crews shall check the function of the VTR system. If the passenger safety demo has not been completed in time, cabin crew should advise the cockpit crew. Aircraft shall not depart unless cockpit crew has received the "abin ready" signal.
